Traffic Safety Products Manufacturer

WIRELESS MONITORING, STATUS LOGS

K&K's Crosstalk proprietary communication system provides continuous monitoring and notification with wireless functionality.

CROSSTALK[®] FOR NAVIGATION

Ensure Continuous Waterway Traffic Safety

CrossTalk is an all-in-one integrated, compact, solar powered navigational lighting controller, flasher, auto-dimmer and scheduler. On-board cellular technology provides a secure, password protected, cloud server connection offering real-time access from virtually anywhere. CrossTalk can be accessed and configured via desktop computer, laptop computer, or any smart mobile device with cellular service to control a single sign or multiple signs in multiple locations using K&K Systems, Inc. CrossTalk web-based, cloud interface.

FEATURES

- ▶ 24/7/365 web-based interface control
- ▶ Continuous monitoring via computer, smartphone or tablet
- ▶ Notifications sent via email and/or text message for:
 - beacon failure
 - low battery
- ▶ Compact all-in-one unit
- ▶ Clean designed control box
- ▶ Solar powered

CROSSTALK CONTROLLER AND MONITORING SOFTWARE

K&K SYSTEMS CROSSTALK CONTROLLER

K&K Systems' Navigational CrossTalk is an advanced wireless solar lighting controller that allows you to monitor, control, and receive notifications from your navigational system. With our software you can manage beacons, designate managers and/or technician, receive beacon function or outage notifications.

MONITOR

CrossTalk constantly monitors AC and DC power flow to navigational beacons. When power is interrupted, the CrossTalk Software notifies the assigned contact list via text and/or email. CrossTalk detects:

- Blown Bulb • Power Outage • Low Battery Voltage • Low Solar Voltage

COMMUNICATION

K&K provides communication to and from your navigational system by utilizing the CrossTalk controller. Control, monitor and manage all of your beacons if your system involves one or one hundred beacons. With CrossTalk you can manage and receive notifications for multiple beacons in multiple locations with multiple managers from the comfort of your office on computers, smart phones and tablets. The contacts portion of the CrossTalk software allows for multiple managers so your systems is not reliant on a single individual.

NOTIFICATION and BACKUP

If your primary beacon system fails, you will be the first to know. CrossTalk software sends an email and/or text message to your preassigned contact list as soon as an outage is detected. Simultaneously, the backup LED is activated assuring that waterway obstacles are illuminated. With CrossTalk, you are always just a click away from your navigational beacons.

MONITORING SERVICE

Every CrossTalk comes standard with 10-year monitoring service. This means that you will not receive a monitoring service charge for 10 years when using any of the K&K's Navigational Systems. When your systems is installed, your communication systems is setup and in operational mode. Simply login to our free, cloud-based, CrossTalk software to manage your beacons.

Contact K&K Systems today for the most innovative navigational system management and backup system available.
